

CASE STUDY:

UK Retail Bank Achieves 99% Time Savings with HAELO's REGENESIS & RegGenome Data

THE CHALLENGE

HAELO, a pioneering RegTech startup, secured funding from UKRI in collaboration with the Financial Regulation Innovation Lab to create a proof of concept for Tesco Bank. The project, commissioned by Tesco Bank's Head of Regulatory Affairs, aimed to develop a user-friendly portal for navigating regulatory documents, enabling users to efficiently filter and find relevant information, saving time and improving productivity.

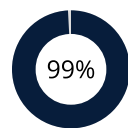

THE SOLUTION

Leveraging the unique metadata provided by RegGenome, HAELO developed REGENESIS, a cutting-edge cloud-based application. This solution accurately identified and presented regulatory changes relevant to Tesco Bank. Remarkably, tasks that previously required two weeks of manual effort by a team of regulatory experts were completed in under two minutes with the same or even greater level of accuracy, thanks to the automated system powered by RegGenome's robust data.

WHY REGGENOME

RegGenome stood out among regulatory data providers due to two critical factors: the ease with which their data can be interrogated and the ethical sourcing of their data. These attributes ensured that HAELO could deliver a solution with complete confidence, offering clients peace of mind about compliance with proper permissions for data collection and processing.

THE RESULT

Time Saved: REGENESIS reduced the time required to process regulatory updates from two weeks to two minutes—a **99% reduction** in effort.

Productivity Gains: Enabled the regulatory team to reallocate over **320 hours** per project to higher-value tasks.

Discover how RegGenome's AI-driven data can power your regulatory solutions to achieve compliance and operational excellence
