

# RegGenome's GenAI-Optimised Regulatory Repository Service

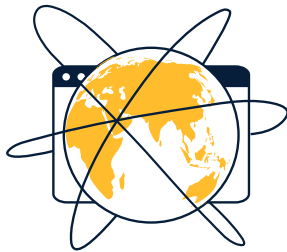

Your organisation needs a way to prioritise relevant regulations and pinpoint specific obligations quickly and efficiently. Through deep learning, we at RegGenome produce a jurisdiction-agnostic repository of rich, descriptive and inferential GenAI-optimised metadata, enabling machines to efficiently and effectively identify, interrogate, present and manage large volumes of complex regulations.

We utilise universal information structures to organise and describe regulations in a standardised way, processing regulations from any authority in any language. You can operationalise a single regulatory dataset within your infrastructure or access data through an API to power both proprietary and third-party solutions.

## Benefits for your organisation

### Up-to-Date Regulatory Content

Accelerate content acquisition and regulatory analysis with global coverage, timely updates, and extensive coverage across different regulatory domains, jurisdictions, and languages.

### GenAI-Optimised Content

Our data empowers regulatory GenAI solutions to be built on top of foundational LLMs. This enables reliable solutions to manage regulatory changes, understand policy impact, retrieve specific information, address queries, and produce document summaries via GenAI.

### Reliable Data

Our information structures are built on provenance, anchored to regulatory standards developed in conjunction with regulatory experts convened by the University of Cambridge.

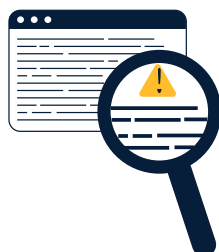

### Data Control

Enhance both security and compliance by maintaining and governing content within your own digital ecosystem. Access a comprehensive in-house regulatory data library.

### Increased Relevancy

Enriched with document and sub-document level metadata, our content enables you to perform granular searches to filter out the noise and engage only with relevant content.

### Our metadata enables application builders and data science teams to benefit from:

**Enhanced Navigation:** Create alerts to track changes based on specific thematic searches and receive timely updates.

**Targeted Distribution and Analysis:** Identify common regulatory obligations and simplify routing to teams.

**Dashboard Creation:** Create dashboards for policy development visibility, regulatory regime comparison, and data interrogation.

**Flexible Integration:** Integrate data effortlessly into any existing application or tool and maintain continuity with current operations.

Contact us to discover how our regulatory data empowers organisations to efficiently navigate regulatory complexity and facilitate up-to-date adherence to regulatory changes.
